

Radiant copper by [@hair_bynay](#)

For the darker metallic seeker, copper will be the go to shade to create this finish. The key is to use the right product for that gleaming effect.

COLOR

COLOR FORMULAS

- A. Color Touch + Color Touch Emulsion
20g 6/47 + 20g 6/7 + 40g 1.9%
- B. Color Touch + Color Touch Emulsion
20g 7/43 + 20g 7/4 + 40g 4%

@hair_bynay has used 2 different formulas from Wella Professionals demi permanent range Color Touch. A deeper mixture of 6/47 + 6/7 with Color Touch Emulsion 1.9% at the root melted into the vibrancy of 7/43 + 7/4 with Color Touch Emulsion 4%. The 4% is used here for more intensity to allow that metallic to glow.

STYLE

For longer hair the shine is the main focus so using an oil to allow for maximum reflection is a good base. Wella Professionals has 2 distinct subliming oils from Oil Reflections. A light version for finer hair to give a luminous pearlescent shine and a smoothening oil to give glossy radiant finish.
